VALLEY BUILDING PRODUCTS COMPANY PROFILE

Valley Building Products Company is a subsidiary of its parent company, the Sowles Company. Valley Building Products Company/MT. (VBPM) incorporated its business office in Billings, Montana in September of 1979. The Billings office serves the construction needs in the states of Montana, Wyoming, and parts of Idaho. Our office provides the following services:

- Material quotes & cost estimates for preformed metal roof, wall and soffit panels.
- Material quantity take-offs for metal roofs, wall, and soffit areas.
- Detail services to engineer shop drawings and develop bills of material for panel fabrication.
- Ability to integrate and access outside louvers, doors, and windows into our panel system.
- Ability to quote and provide labor costs. We do this through the services of our parent company, the Sowles Company.
- Capability to furnish, through the Sowles Company, the man-power necessary to install all types of metal roof and wall systems.

Our primary source of providing metal panels to the construction industry is through **Centria** (formerly H.H. Robertson Co.) and **AEP-Span**. However, we have dealt with and provided panels from manufacturers such as Pac-Clad, Morin, Reynolds, and Alcoa.

In summary, our office has the capabilities to conduct take-offs, provide material quotes, engineer shop drawings, and be a liaison to panel manufacturers to supply and erect all insulated and un-insulated metal roof, wall, and exterior metal soffit needs.
